## Launch in HDAP

App URL : <https://cs6440-s19-prj051.apps.hdap.gatech.edu/>

Navigate to [App URL](#) to launch our web application.

## Launch via Docker

1. Navigate to **STDI** directory
2. Compile the source code by running the command

```
$ docker-compose up -d
```

3. Go to your browser and access localhost:8080

# Launch via local code

1. Import the STDI to IntelliJ from STDI as maven project.
2. Repeat Next, make sure Java 1.8 is selected on the way.
3. If not set yet, open Run > Edit Configuration
4. On the left column, select STDIAApplication
5. Set Main class to STDIAApplication if not already set, everything else should be as default.
6. Hit the play button or Run > Run STDIAApplication to start the project
7. Go to your browser and access localhost:8080
